Education

- **The British University in Egypt** — Cairo, Egypt
  MSc. in Web Science (Dual Degree) — *Sep 2026 – Present*
- **University of Science and Technology at Zewail City** — Giza, Egypt
  BSc. in Computer Science and Artificial Intelligence — *Oct 2022 – June 2026*
  CGPA: 3.315

Technical Skills

Languages: Python, Java, Go, JavaScript, TypeScript, C/C++, HTML/CSS, SQL
Frameworks: React, Next.js, Node.js, Spring Boot, ASP.NET, Thymeleaf
Tools/Databases: PostgreSQL, MongoDB, MSSQL, Git, Docker, Figma, Redis, Arduino

Experience

- **Full Stack Software Engineer** — Al-Maadi, Egypt
  Ramses LLC - On Site — *July 2026 – Present*
  - Contributing to ongoing development of a superapp.
  - Improving mini apps features, boosting UX by 30% via responsive design audits.
  - Collaborating on complex technical challenges to enhance architectural problem-solving skills.
  - Technologies: Elixir, Next.js, Figma, Git.
- **Developer Intern** — Zahraa Al-Maadi, Egypt
  WEBenia - On Site — *June 2025 – July 2025*
  - Contributing to ongoing development projects and solving real-world tasks under senior guidance.
  - Improving front-end features and fixing cross-browser bugs, boosting UX by 30% via responsive design audits.
  - Collaborating on complex technical challenges to enhance architectural problem-solving skills.
  - Technologies: React, Next.js, Figma, Git.

Projects

- **LinguaAI** | *FastAPI, Flutter, Supabase, Whisper*
  - Implemented AI-driven pronunciation assessment and personalized learning using Whisper ASR, OCR, vector search, and LLM-powered feedback to generate contextual explanations and exercises.
  - Designed and tested features including personalized vocabulary management, spaced-repetition flashcards, gamification, and comprehensive integration and regression testing to ensure application reliability.
- **GraphRAG vs. Conventional RAG for Code QA** | *Python, AST Analysis, Knowledge Graphs, LLMs*
  - Conducted comparative research on GraphRAG and traditional RAG approaches for context-aware code question answering.
  - Designed a pipeline using AST-based entity extraction and knowledge graphs to improve context retrieval accuracy.
  - Analyzed performance differences in reasoning, dependency resolution, and comprehension of complex codebases.
- **WhatsApp Clone** | *Node.js, Go, React, TypeScript, PostgreSQL, MongoDB*
  - Built a scalable real-time messaging app supporting group chat, message status, and end-to-end encryption.
  - Achieved message delivery latency of under 300ms using WebSocket optimization and Go-based concurrency testing.
- **Libra - Library Management System** | *Spring Boot, Thymeleaf, H2 Database*
  - Built a full-stack system for managing library operations, including book tracking, user roles, and transactions.
  - Improved admin efficiency by 50% through a centralized dashboard supporting 200+ simultaneous transactions.
- **TechHub** | *HTML, CSS, JavaScript, ASP.NET, MSSQL*
  - Developed a responsive community hub with interactive forums and event pages.
  - Reduced page load time by 45% using optimized MSSQL queries and asset minification.

Open Source Contributions

- **30 Seconds of Java** | GitHub
  - Contributed concise Java code snippets and documentation focused on developer accessibility and best practices.
- **Java Design Patterns** | GitHub
  - Enhanced documentation and examples for common design patterns, aiding a community of 3K+ contributors.
